## **General Information**

## **Chapter 1 General Information**

#### 1.1 Introduction

The ACP-2000MB is a compact, rugged 2U-high 19" rackmount industrial computer chassis designed for space-conscious applications. Customers can expand their business without having to worry about space efficiency because the ACP-2000MB is only 2U-high and supports all AIMB series industrial motherboards. Fast-growing Internet service providers and corporate enterprise customers can use the ACP-2000MB as computing platforms for their mission critical applications. This chassis comes with 300W ATX PFC power supply, dual abundant cooling fans, front-accessible air filter, USB, PS/2 keyboard connector, system reset, system alarm reset and system power switch. The viewable LED indicators on front door support alarm notification of system status.

This ultra-compact 2U ATX M/B form factor delivers rack space optimization without sacrificing performance, expandability, serviceability, or manageability.

## 1.2 Specification

| Table 1.1: Specification |                        |  |   |  |  |
|--------------------------|------------------------|--|---|--|--|
|                          |                        | Front-accessible   | Internal  |  |  |

## 1.5 Dimension Diagram

Figure 1.1: Dimension Diagram

## CHAPTER CHAPTER

## **System Setup**

## **Chapter 2 System Setup**

#### 2.1 System Installation

WARNING: Before starting the installation process, turn off the power switch and disconnect the system power cord from the chassis, or unplug the power cord from the power outlet. When in doubt, consult with an experienced technician.

#### 2.1.1 Removing the top cover

First, remove the chassis cover by unscrewing six (6) M4 screws, which are on the both sides and rear location of chassis.

#### 2.1.2 AIMB installation

Select one AIMB (Advantech Industrial M/B), such as AIMB-740 and install it into ACP-2000MB-30Z. There are three kinds of AIMB rear I/O form factor: w/o LAN port (such as AIMB-740V), single LAN port (such as AIMB-740VE/G) and dual LAN ports (such as AIMB-740E2). Take the ACP-2000MB rear I/O bracket from your AIMB accessory box and attach M/B I/O bracket with AIMB first, then install them into ACP-2000MB. After fixing AIMB to ACP-2000MB with six (6) screws, please refer to table 2.1 to connect AIMB to the correct cables.

| Tabl | Table 2.1: AIMB connector location list |      |                            |  |  |  |  |
|------|---|------|----------------------------|--|--|--|--|
| ATX1 | 4-pin 12V power connector               | ATX2 | 20-pin ATX power connector |  |  |  |  |
| CN12 | 5-pin K/B connector                     | USB  | 9-pin USB connector        |  |  |  |  |
| CN18 | 2-pin RESET SW connector                | CN19 | 2-pin HDD LED connector    |  |  |  |  |
| CN21 | 2-pin POWER SW connector on             |      |                            |  |  |  |  |

Figure 2.1 AIMB-740 Layout

#### 2.1.3 Add-on Card Installation

Please follow the below installation guide to install PCI card into ACP-2000MB. First, release card cage, which is with riser card as figure 2-2, from ACP-2000MB by two (2) screws. Install your AIMB & M/B I/O window into ACP-2000MB and secure them with screws.

Figure 2.2 Card cage with riser card

Return card cage and riser card back to original location, but first you have to insert riser card into AIMB PCI 1-slot, then tighten them with the same two (2) screws you used before. Plug your PCI add-on cards into the PCI slots of riser card as showed by figure 2-3.

Figure 2.3 Install PCI add-on card

## 2.2 Peripheral Installation

The ACP-2000MB standard drive bay can hold one 5.25" device and three 3.5" drives.

Figure 2.4 5.25" & 3.5"

Figure 2.5 Internal 3.5" HDD

#### 2.2.1 5.25" & 3.5" device

- a. Undo the four screws then lift off the 5.25" & 3.5" drive bay.
- b. Install 5.25" & 3.5" devices into their proper location as shown in figure 2-4, and secure them with the screws provided.
- c. Return storage back to original location shown in figure 2-6 and secure them well

#### 2.2.2 Internal 3.5" HDD

Refer to figure 2-5 to find the internal 3.5" HDD holder location, release holder by four M4 screws and install up to two internal 3.5" HDD. Return storage back to original location shown in figure 2-6, and then secure them well.

Figure 2.6 Location of storage devices

## 2.3 System Status Indicator

| Table 2.2 System Status LED |                     |          |                 |  |  |
|-----------------------------|---------------------|----------|-----------------|--|--|
| LED                         | Description         | RED      | GREEN or Orange |  |  |
| PWR                         | System Power        | N/A      | Normal          |  |  |
| HDD                         | Hard Drive activity | N/A      | Data access     |  |  |
| FAN                         | Cooling Fan status  | Abnormal | Normal          |  |  |
| TEMP                        | Chassis Temperature | Abnormal | Normal          |  |  |

PWR LED turns on, it indicates system power on. HDD LED turns on, it indicates HDD data access FAN LED turns RED and blinks, indicates a failing cooling fan. An alarm is also activated. To stop the alarm buzzer, press the alarm reset button then replace the fan with good one immediately.

TEMP LED turns RED and blinks, indicates system detects rising temperature inside the chassis. An alarm is also activated. To stop the alarm buzzer, press the alarm reset button. Inspect the system components, such as CPU cooler, or fan filter immediately. Make sure CPU cooler is working fine and airflow inside the chassis is smooth and not blocked with dust or other particles.

#### 2.4 Cooling Fan & Filter

There are dual cooling fans as shown in figure 2-7 located inside the chassis. The cooling fans are low maintenance and provide adequate cooling to the system. If one of those cooling fails, please release two screws of dual cooling fan holder first, move away internal 3.5" HDD storage to find the alarm board. Find FAN1 and FAN2 connectors on alarm board, pull out the connector of the dual cooling fan from the alarm board. Replace failed cooling fan with good one. Please refer to figure 2-8.

Figure 2.7 Dual cooling fans

Figure 2.8 Cooling fan maintenance

Please refer the figure 2-9 to change the filter if you find the filter is blocked with dust or other particles

Figure 2.9 System Filter

## 2.5 Alarm Board, USB & PS/2

#### 2.5.1 Alarm Board

The alarm board is located on the side of chassis. The detailed layout and specifications of the alarm board are as follows.

Figure 2.10 Alarm board layout

#### 2.5.2 Alarm Board Specification

| 2.5.2 Alarm Board Specification |   |  |  |  |  |  |
|---------------------------------|---|--|--|--|--|--|
| Table 2.3 C                     | Table 2.3 Connector Description                                   |  |  |  |  |  |
| Input Power:                    |   |  |  |  |  |  |
| CN1                             | +5V, +12V   |  |  |  |  |  |
| Connector desc                  | cription  |  |  |  |  |  |
| FAN1~FAN7                       | FAN connector, Pin 1: GND, Pin 2: +12V, Pin 3: FAN Signal         |  |  |  |  |  |
| CN2                             | 10/100M LAN Connector   |  |  |  |  |  |
| CN4                             | I2C sensor board connector.                                       |  |  |  |  |  |
|                                 | It can connect up to 8 thermal boards in a roll                   |  |  |  |  |  |
| CN8                             | RS-232 of alarm board connector                                   |  |  |  |  |  |
| CN10                            | LCM display board connector                                       |  |  |  |  |  |
| CN11~CN12                       | SNMP-1000 daughter board connector                                |  |  |  |  |  |
| CN13                            | Voltage signal connector, connect from PSU or backplane, includes |  |  |  |  |  |
|                                 | ±12V, ±5V, 3.3V   |  |  |  |  |  |
| CN16                            | Power good input  |  |  |  |  |  |
| CN17                            | Alarm reset input   |  |  |  |  |  |
| CN18                            | LED display board connector                                       |  |  |  |  |  |
| CN19                            | Connector bank from CPU card (SBC)                                |  |  |  |  |  |
| CN20                            | Connector bank to system chassis                                  |  |  |  |  |  |
| BT1                             | Battery pack connector  |  |  |  |  |  |
| J1                              | Buzzer output   |  |  |  |  |  |

## **Safety Instructions**

## **Appendix B Safety Instructions**

## **Safety Instructions**

- 1. Read these safety instructions carefully.
- 2. Keep this User's Manual for later reference.
- 3. Disconnect this equipment from any AC outlet before cleaning. Do not use a damp cloth, liquid or spray detergents for cleaning.
- 4. For plug-in equipment, the power outlet socket must be located near the equipment and must be easily accessible.
- 5. Keep this equipment away from humidity.
- 6. Put this equipment on a reliable surface during installation. Dropping it or letting it fall may cause damage.
- 7. The openings on the enclosure are for air convection. Protect the equipment from overheating. DO NOT COVER THE OPENINGS.
- 8. Make sure the voltage of the power source is correct before connecting the equipment to the power outlet.
- 9. Position the power cord so that people cannot step on it. Do not place anything over the power cord.
- 10. All cautions and warnings on the equipment should be noted.
- 11. If the equipment is not used for a long time, disconnect it from the power source to avoid damage by transient overvoltage.
- 12. Never pour any liquid into an opening. This may cause fire or electrical shock.
- 13. Never open the equipment. For safety reasons, the equipment should be opened only by qualified service personnel.
- 14. If one of the following situations arises, get the equipment checked by service personnel:
  - a. The power cord or plug is damaged.
  - b. Liquid has penetrated into the equipment.
  - c. The equipment has been exposed to moisture.

- d. The equipment does not work well, or you cannot get it to work according to the user's manual.
- e. The equipment has been dropped and damaged.
- f. The equipment has obvious signs of breakage.
- 15. DO NOT LEAVE THIS EQUIPMENT IN AN ENVIRONMENT WHERE THE STORAGE TEMPERATURE MAY GO BELOW -20° C (-4° F) OR ABOVE 60° C (140° F). THIS COULD DAMAGE THE EQUIPMENT. THE EQUIPMENT SHOULD BE IN A CONTROLLED ENVIRONMENT

The sound pressure level at the operator's position according to IEC 704-1:1982 is no more than 70dB(A).

DISCLAIMER: This set of instructions is given according to IEC 704-1. Advantech disclaims all responsibility for the accuracy of any statements contained herein.

- 16. Any insulation on conductors inside EQUIPMENT which are connected to ACCESSIBLE METAL PARTS or other PROTECTIVELY EARTHED parts with a protective function to the PROTECTIVE EARTH TERMINAL shall be identified by the colors green and yellow at the termination of the conductors.
- 17. CAUTION: The computer is provided with a Battery-powered Real-Time Clock Circuit. There is a danger of explosion if battery is incorrectly replaced. Replace only with same or equivalent typed recommended by the manufacturer. Discard use batteries according to the manufacturer's instructions
- 18. The computer is provided with appropriate safety standards including lec 60826.
- 19. Install the computer. Before your begin make sure the Green/Yellow wire reliable connection between metal part of computer and earthing of final system.
