This manual is for the PCM-3380.

Part No. 2006338010
1st Edition,   Printed Jan 2005

Packing List

Before you begin installing your card, please make sure that the following materials have been shipped:

- 1 PCM-3380 all-in-one single board computer
- 1 CD disk for utility and drivers
- 1 startup manual
- BATTERY 3V/210 mAh cable CR2032WK with Wire ASS'Y (p/n:1750129010)
- 6P(MINI-DIN)-6P(Wafer 2.0mm) 5cm (p/n:1703060053)
- IDE cable (p/n:1701440350)
- Wire ATX power (p/n:1703200380)
- Ethernet RJ-45 Conn.conversion cable (p/n:1701100202)
- KB / MOUSE Y-cable (p/n:1700060202)
- 1 COM port cable (p/n: 1701200220)
- 1 USB Cable Adaptor (p/n: 1700000897)
- 1 VGA cable (p/n: 1700000898)
- FLAT CABLE D-SUB25P(F)/26P-2.0MM 25CM (p/n: 1700000916)
- WIRE 5P-2.0MM/AUDIO JACK(B+R) 10CM (p/n:1700000918)

If any of these items are missing or damaged, contact your distributor or sales representative immediately.

Model No. List	Description
PCM-3380F-M0A1	Embedded on board Celeron M 600 SBC w/Audio,VGA,LCD
PCM-3380F-S0A1	Embedded on board Pentium M SBC w/Audio,VGA,LCD

FCC

This device complies with the requirements in part 15 of the FCC rules: Operation is subject to the following two conditions:

1.This device may not cause harmful interference, and

2. This device must accept any interference received, including interference that may cause undesired operation

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this device in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his/her own expense. The user is advised that any equipment changes or modifications not expressly approved by the party responsible for compliance would void the compliance to FCC regulations and therefore, the user's authority to operate the equipment.

Caution!

There is a danger of a new battery exploding if it is incorrectly installed. Do not attempt to recharge, force open, or heat the battery. Replace the battery only with the same or equivalent type recommended by the manufacturer. Discard used batteries according to the manufacturer's instructions.

Achtung!

Additional Information and Assistance

1. Visit the Advantech web site at **www.advantech.com** where you can find the latest information about the product.

2. Contact your distributor, sales representative, or Advantech's customer service center for technical support if you need additional assistance. Please have the following information ready before you call:

- Product name and serial number
- Description of your peripheral attachments
- Description of your software (operating system, version, application software, etc.)
- A complete description of the problem
- The exact wording of any error messages

Contents

General Information

This chapter gives background information on the PCM-3380.

Sections include:

- Introduction
- Features
- Specifications
- Board layout and dimensions

Chapter 1 General Information

1.1 Introduction

The PCM-3380 is a solid, general purpose single board computer(SBC) to satisfy various industrial and miltimedia applications. With onboard Intel® Pentium® M1.1G, Intel® Pentium® M1.6G or Intel® Celeron® M 600(optional), 10/100 Base-T LAN, DDR memory, 2 channel 18-bit LVDS, CRT Display function and PCI interface, the PCM-3380's design is 120-pin PCI PC104+ form factor and support 6 ports USB 2.0.

1.2 Features

- Onboard Intel® Pentium® M 1.1G, Intel® Pentium® M1.6G, Intel® Celeron® M 600 (optional)
- Memory up to 1 GB DDR RAM
- With Vcore 2 phase design for more stable system design
- Support 10/100Base-T Ethernet
- Support 6 port Host USB2.0
- Support dual display CRT+ LVDS
- Support Audio. Line In, Mic In and Line Out.

1.3 Specifications

Standard SBC Functions

- **CPU:** Supports onboard Intel® Pentium®M 1.1G, Intel® Pentium®M 1.6G or Celeron®M 600
- **BIOS:** Award 512 KB Flash memory
- **System memory:** 200 pin SO-DIMM socket, support Double Data Rate (DDR)128 MB to 1 GB, accepts 128/256/512/1000 MB DDR200/266/333 DRAM.
- **System chipset:**Intel 855GME (GMCH)/ICH4 chipset 400Mhz FSB
- **2nd cache memory:** 1MB on the Intel® Pentium® M processor 512KB Intel® Celeron® M 600, 0KB ULV Intel® Celeron® 600

- **Enhanced IDE interface:** 1 Enhanced IDE interface 1st Interface supports 2 IDE devices (1. Master 2. Slave) 1 is for IDE device, the other one is for CompactFlasah PIO mode 3, 4 with Bus Mastering up to 14MB/sec
- **Serial ports:** Two serial RS-232 ports
- **Parallel port:** One parallel port, supports SPP/EPP/ECP mode
- **Keyboard/mouse connector:** Wafer Box
- **Power management:** Supports Advanced Power Management /ACPI
- **Watchdog timer**: 255-level timer intervals, setup by software, generates system reset
- **USB**: Six USB 2.0 compliant host ports
- **Expansion:**Supports 120-pin PCI104 module connector

Solid State Disk

- Supports one 50-pin socket for CFC type I, (Type II for optional)

VGA/LCD Interface

- **Chipset:** Intel 855GME Integrated
- **Frame buffer:** UMA architecture, Up to 64 MB of dynamic video memory allocation
- **Display mode:** CRT Modes: up to 1600 x 1200 at 85-Hz and 2048 x 1536 at 75-Hz
- **LCD mode:** Dual channel LVDS panel support up to UXGA panel resolution with frequency range from 25 MHz to 112 MHz
- **LVDS:** Support 2 channel (18-bit) LVDS LCD panel

Ethernet interface

- **Chipset:**
- Intel 82562Em (PCM-3380F)
- **Ethernet interface:**
- IEEE 802.3u 10/100BASE-T Fast Ethernet compatible(PCM-3380F)

Audio Function (optional)

- **Chipset:** Realtek ALC202
- **Audio controller:** AC'97 complian2.0, Line in, Line out, Mic In

Mechanical and Environmental

- **Dimensions:** (L x W)115 x 105 mm complain with PCI-104 1.0

- **Power supply Voltage:**ATX, Power required, +5V, +12V, 5V stand by
- **Power Requirement:** Celeron M 600 MHz+ DDR 512MB:

    Max:2.16A@5V

    Average:1.80A@5V

Pentium M 1.1 GHz + DDR 512MB:

    Max:3.68A@ 5V

    Average:2.30A@5V

Pentium M 1.6 GHz + DDR 512MB:

    Max:7.37A@ 5V

    Average:3.72A@5V

- **Power consumption:**

Pentium-M processor 1.6Ghz(Disable Intel Speed step function)

Power Level	Power consumption
Normal Operation	3.72A
60%	5.05A
70%	5.68A
75%	5.80A
80%	6.17A
85%	6.67A
90%	6.82A
95%	7.05A
100	7.37A

Pentium-M processor 1.6Ghz(Enable Intel Speed step function)

Power Level	Power consumption
Normal Operation	1.74A

Celeron-M processor 600Mhz without Speedstep feature

Power Level	Power consumption
Normal Operation	1.80A
60%	1.83A
70%	1.92A
75%	1.95A
80%	1.98A
85%	2.04A
90%	2.09A
95%	2.12A
100	2.16A

Pentium-M processor 1.1Ghz(Disable Intel Speed step function)

Power Level	Power consumption
Normal Operation	2.30A
60%	2.67A
70%	2.97A
75%	3.06A
80%	3.10A
85%	3.30A
90%	3.39A
95%	3.58A
100	3.68A

Pentium-M processor 1.1Ghz(Enable Intel Speed step function)

Power Level	Power consumption
Normal Operation	1.74A

- **Operating temperature:**0 ~ 60° C (32~140° F)
- **Operating Humidity:**0% ~ 95% Relative Humidity, noncondensing
- **Weight:** 0.277 kg (with heatsink)

1.4 Board layout: dimensions
Figure 1.1: Board layout: dimension(component side)
Figure 1.2: Board layout: dimension (solder side)

Installation

This chapter explains the setup procedures of PCM-3380 hardware, including instructions on setting jumpers and connecting peripherals, switches and indicators. Be sure to read all safety precautions before you begin the installation procedure.

Chapter 2 Installation

2.1 Connectors

On-board connectors link the PCM-3380 to external devices such as hard disk drives, a keyboard, or floppy drives. The table below lists the function of each of the board's connectors.

Table 2.1: Connectors

Label	Function
CN1	LCD Inverter Con.
CN2	Battery Con.
CN4	KB/MS Con.
CN5	IDE 44pin Con.
CN6	Power/Reset Header/Buzzer
CN8	Power Con.
CN9	LAN Con.
CN10	Fan Con. (5V Only)
CN11	Audio Line-out connector
CN12	LVDS Con.
CN13	ATX AUX Con.
CN14	CRT Con.
CN15	Audio Line-in/Mic connector
CN16	CF connector
CN17	COM Port Con.
CN18	USB Con.
CN19	LPT Con.

2.2 Locating Connectors
Figure 2.1: Jumper & Connector (component side)
Figure 2.2: Jumper & Connector (solder side)

2.3 Installing SO-DIMMs

The procedure for installing SO-DIMMs is described below. Please fol-
low these steps carefully. The number of pins are different on either side
of the breaks, so the module can only fit in one way. SO-DIMMs modules
have different pin contacts on each side, and therefore have a higher pin
density.

1.   Make sure that the two handles of the SO-DIMMs socket are in the
     "open" position. i.e. The handles remain leaning outward.

2.   Slowly slide the SO-DIMMs module along the plastic guides on
     both ends of the socket.

3.   Press the SO-DIMMs module right down into the socket, until you
     hear a click. This is when the two handles have automatically
     locked the memory module into the correct position of the socket.

To **remove** the memory module, just push both handles outward, and the
module will be ejected from the socket.

2.4 IDE, CDROM hard drive connector (CN5)

The PCM-3380 provides 1 IDE channels which you can attach up to two
Enhanced Integrated Device Electronics hard disk drives or CDROM to
the PCM-3380's internal controller. The PCM-3380's IDE controller uses
a PCI interface. This advanced IDE controller supports faster data trans-
fer, PIO mode 3, mode 4 and UDMA/33.

2.4.1 Connecting the hard drive

It requires one of two cables (not included in this package), depending on
the drive size. 1.8" and 2.5" drives need a 1 x 44-pin to 2 x 44-pin flat-
cable connector. 3.5" drives use a 1 x 44-pin to 2 x 40-pin connector.

Wire number 1 on the cable is red or blue, and the other wires are gray.

1.   Connect one end of the cable to CN5. Make sure that the red (or
     blue) wire corresponds to pin 1 on the connector, which is labeled
     on the board (on the right side).

2.   Plug the other end of the cable into the Enhanced IDE hard drive,
     with pin 1 on the cable corresponding to pin 1 on the hard drive.
     (See your hard drive's documentation for the location of the con-
     nector.)

If desired, connect a second drive as described above.

Unlike floppy drives, IDE hard drives can connect to either end of the cable. If you install two drives, you will need to set one as the master and one as the slave by using jumpers on the drives. If you install only one drive, set it as the master.

2.5 Solid State Disk

The PCM-3380 provides a CompactFlash™ card socket for Solid state disk solutions.

2.5.1 CompactFlash (CN16)
The CompactFlash card shares a secondary IDE channel which can be enabled/disabled via the BIOS settings.

2.6 Keyboard and PS/2 mouse connector (CN4)

The PCM-3380 board provides a keyboard connector that supports both a keyboard and a PS/2 style mouse. In most cases, especially in embedded applications, a keyboard is not used. If the keyboard is not present, the standard PC/AT BIOS will report an error or fail during power-on self-test (POST) after a reset. The PCM-3380's BIOS standard setup menu allows you to select "All, But Keyboard" under the "Halt On" selection. This allows no-keyboard operation in embedded system applications, without the system halting under POST.

2.7 Front Panel Connector (CN6)

Next, you may want to install external switches to monitor and control the PCM-3380. These features are optional: install them only if you need them. The Front Panel connector (CN6) is a 6-pin male, dual in-line header. It provides hardware reset, ATX power ON/OFF switch connector, and Buzzer.

2.7.1 Power Switch (pin 1-2 of CN6)
If your computer case is equipped with an ATX power supply, you should connect the power on/off button on your computer case to CN6. This

connection enables you to turn your computer on and off.

2.7.2 Reset switch (pin 3-4 of CN6)

If you install a reset switch, it should be an open single pole switch. Momentarily pressing the switch will activate a reset. The switch should be rated for 10 mA, 5 V.

2.8 Power connectors (CN8,CN10)

2.8.1 ATX power connector, +5V (CN8)

Supplies main power to the PCM-3380 (+5V,+12V) and to devices that require.

2.8.2 CPU Fan power supply connector (CN10)

Provides power supply +5V to CPU cooling fan.

2.9 ATX AUX connector (CN13)

2.9.1 ATX feature (CN13)

The PCM-3380 can support an advanced soft power switch function, if an ATX power supply is used.

Important   *Make sure that the ATX power supply can take at least a 500 mA load on the 5 V standby lead (5VSB). If not, you may have difficulty powering on your system.*

2.10 Audio interfaces (CN11.CN15)

The PCM-3380 is equipped with a high quality audio interface, which provides 16-bit CD-quality recording and playback as well as OPL3 compatible FM music. It is supported by all major operating systems and is completely compatible with Sound Blaster Pro.

2.10.1 Audio connector(Line Out)(CN11)

The PCM-3380 provides all major audio signals on a 3-pin flat-cable connector, CN11. The audio signals include Microphone in (mono), Line out (stereo). You will need an adapter cable if you use traditional jack connectors for these audio signals.

2.10.2 Audio connector(Line In/Mic In)(CN15)

The PCM-3380 provides all major audio signals on a 5-pin flat-cable connector, CN15. The audio signals include Microphone in (mono), Line in (stereo).

2.11 COM port connector (CN17)

The PCM-3380 provides two RS-232 serial ports in one COM port connector. It provides connections for serial devices (a mouse, etc.) or a communication network. You can find the pin assignments for the COM port connector in Appendix B.

2.12 CRT/LVDS interface connections (CN14,CN12)

The PCM-3380's VGA interface can drive conventional CRT displays and is capable of driving a wide range of LVDS flat panel displays. The board has three connectors to support these displays: one for standard CRT VGA monitors,one for LVDS type LCD panels.

2.12.1 CRT display connector (CN14)

CN14 is a 12-pin, dual-inline header used for conventional CRT displays. A simple one-to-one adapter can be used to match CN14 to a standard 15-pin D-SUB connector commonly used for VGA. Users can drive a standard progressive scan analog monitor with pixel resolution up to 1600 x 1200 at 85 Hz and up to 2048 x 1536 at 75 Hz. Pin assignments for CRT display connector CN14 are detailed in Appendix B.

2.12.2 LVDS connector (CN12)

The PCM-3380 uses the Intel 855 GME chipset that supports single- or dual-channel LVDS panel up to UXGA panel resolution with frequency range from 25MHz to 112MHz.

The PCM-3380 supports single or dual-channel LVDS panels up to UXGA panel resolution with frequency range from 25MHz to 112MHz. The display mode can be 2 channel (2 x 18bit) LVDS LCD panel displays.

2.13 Ethernet configuration (CN9)

The PCM-3380 is equipped with a high performance 32-bit PCI-bus Ethernet interface which is fully compliant with IEEE 802.3U 10/ 100Mbps CSMA/CD standards. It is supported by all major network operating systems.

2.13.1 Network boot

The Network Boot feature can be utilized by incorporating the Boot ROM image files for the appropriate network operating system. The Boot ROM BIOS files are included in the system BIOS, which is on the utility CD disc.

2.14 USB connectors (CN18)

The PCM-3380 board provides up to six USB (Universal Serial Bus) 1.1/ 2.0 ports. This gives complete Plug and Play, and hot attach/detach for up to 127 external devices. The USB interfaces comply with USB specification Rev. 1.1.

You will need an USB cable if you use USB connectors. The USB interfaces can be disabled in the system BIOS setup.

Software Configuration

This chapter details the software configuration information. It shows you how to configure the card to match your application requirements. The AWARD System BIOS is covered in Chapter 4.

Sections include:

- Introduction
- Connections for standard LCDs

Chapter 3 Software Configuration

3.1 Introduction

The PCM-3380 system BIOS and custom drivers are located in a 512 Kbyte, Flash ROM device, designated U17. A single Flash chip holds the system BIOS, VGA BIOS and network Boot ROM image. The display can be configured via CMOS settings. This method minimizes the number of chips and difficulty of configuration. To set different types of LCD panels, please choose "panel type" from the "integrated peripherals" menu in CMOS setup.

3.2 Connections to One Standard LCDs

The following tables illustrate typical LCD connection pinouts for the PCM-3380.

3.2.1 UB104S01-1(800x600(16 colors) LVDS LCD)

Table 3.1: Connections to LCD/ Flat Pannel (CN12)

Pin assignment		Pin assignment			
Input signal interface		LVDS transmitter/receiver signal mapping			
Pin	**Signal**		**Symbol**	**Function**	
1	Vcc	TxIN0	R0	Red data(LSB)	
2	Vcc	TxIN1	R1	Red data	6 bit red display data
3	GND	TxIN2	R2	Red data	
4	GND	TxIN3	R3	Red data	
5	RxIN0-	TxIN4	R4	Red data	
6	RxIN0+	TxIN5	R5	Red data(MSB)	
7	GND	TxIN6	G0	Green data(LSB)	
8	RxIN1-	TxIN7	G1	Green data	6 bit green display data
9	RxIN1+	TxIN8	G2	Green data	
10	GND	TxIN9	G3	Green data

12	RxIN2+	TxIN11	G5	Green data(MSB)	
13	GND	TxIN12	B0	Blue data(LSB)	
14	CKIN-	TxIN13	B1	Blue data	6 bits blue display data
15	CKIN+	TxIN14	B2	Blue data	
16	GND	TxIN15	B3	Blue data	
17	NC	TxIN16	B4	Blue data	
18	NC	TxIN17	B5	Blue data(MSB)	
19	GND	TxIN18	Hs	Horizontal sync.	
20	GND	TxIN19	Vs	Vertical sync.	
		TxIN20	DE	Data enable	
		TxCLKIN	CLK	Clock	Dot clock

* LCD connector type: HRS DF 19K-20P-1H or compatible

Award BIOS Setup

This chapter describes how to set BIOS configuration data.

Chapter 4 Award BIOS Setup

4.1 System test and initialization

These routines test and initialize board hardware. If the routines encounter an error during the tests, you will either hear a few short beeps or see an error message on the screen. There are two kinds of errors: fatal and non-fatal. The system can usually continue the boot up sequence with non-fatal errors. Non-fatal error messages usually appear on the screen along with the following instructions:

        press <F1> to RESUME

Write down the message and press the F1 key to continue the bootup sequence.

4.1.1 System configuration verification

These routines check the current system configuration against the values stored in the board's CMOS memory. If they do not match, the program outputs an error message. You will then need to run the BIOS setup program to set the configuration information in memory.

There are three situations in which you will need to change the CMOS settings:

1.   You are starting your system for the first time

2.   You have changed the hardware attached to your system

3.   The CMOS memory has lost power and the configuration information has been erased.

The PCM-3380 Series' CMOS memory has an integral lithium battery backup. The battery backup should last ten years in normal service, but when it finally runs down, you will need to replace the complete unit.

4.2 Award BIOS setup

Award's BIOS ROM has a built-in Setup program that allows users to modify the basic system configuration. This type of information is stored in battery-backed CMOS RAM so that it retains the Setup information when the power is turned off.

4.2.1 Entering setup

Power on the computer and press <Del> immediately. This will allow you to enter Setup.
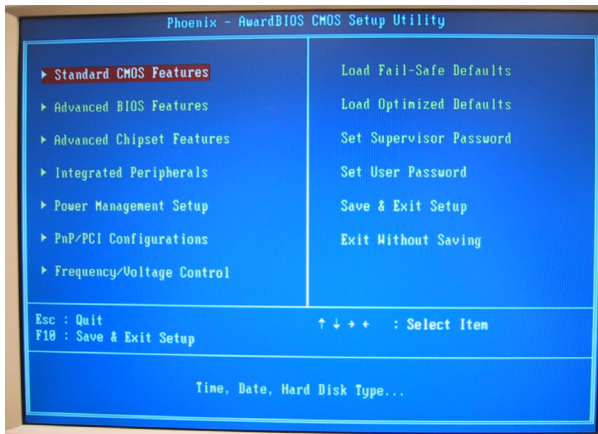

Figure 4.1: BIOS setup program initial screen

4.2.2 Standard CMOS Features setup

When you choose the Standard CMOS Features option from the Initial Setup Screen menu, the screen shown below is displayed. This standard Setup Menu allows users to configure system components such as date, time, hard disk drive, floppy drive and display. Once a field is high-lighted, on-line help information is displayed in the left bottom of the Menu screen.
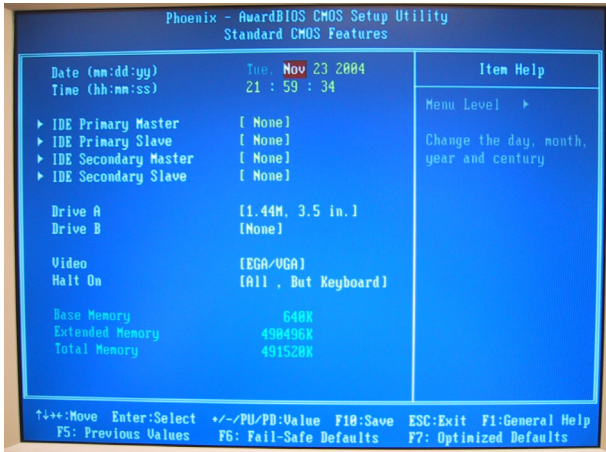

Figure 4.2: CMOS Features setup

4.2.3 Advanced BIOS Features setup

By choosing the Advanced BIOS Features Setup option from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-3380 Series.
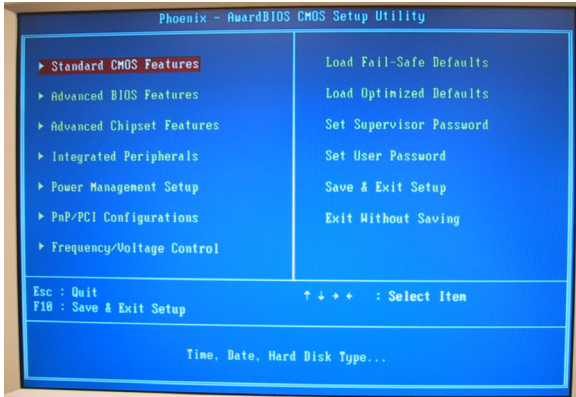

Figure 4.3: Advanced BIOS Features setup

4.2.4 Advanced Chipset Features setup

By choosing the Advanced Chipset Features option from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-3380 Series.
Figure 4.4: Advanced Chipset Features setup

4.2.5 Integrated Peripherals

Choosing the Integrated Peripherals option from the Initial Setup Screen menu should produce the screen below. Here we see the manufacturer's default values for the PCM-3380 Series.
Figure 4.5: Integrated Peripherals

4.2.6 Power Management Setup

By choosing the Power Management Setup option from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-3380 Series.
Figure 4.6: Power Management Setup

4.2.7 PnP/PCI Configurations

By choosing the PnP/PCI Configurations option from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-3380 Series.
Figure 4.7: PnP/PCI Configurations

4.2.8 Frequency/Voltage Control

By choosing the Frequency/Voltage Control option from the Initial Setup Screen menu, the screen below is displayed. This sample screen contains the manufacturer's default values for the PCM-3380

Figure 4.8: Frequency/Voltage Control

Caution   Incorrect settings in Frequency/Voltage Control may damage the system CPU, video adapter, or other hardware.

4.2.9 Load Optimized Defaults

Load Optimized Defaults loads the default system values directly from ROM. If the stored record created by the Setup program should ever become corrupted (and therefore unusable), these defaults will load automatically when you turn the PCM-3380 Series system on.

4.2.10 Set Password

Note   *To enable this feature, you should first go to the Advanced BIOS Features menu, choose the Security Option, and select either Setup or System, depending on which aspect you want password protected. Setup requires a password only to enter Setup. System requires the password either to enter Setup or to boot the system.*

A password may be at most 8 characters long.

To Establish Password

1.   Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.

2.   When you see "Enter Password," enter the desired password and press <Enter>.

3.   At the "Confirm Password" prompt, retype the desired password, then press <Enter>

4. Select Save to CMOS and EXIT, type <Y>, then <Enter>.
Figure 4.9: To Establish Password

To Change Password

1. Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.

2. When you see "Enter Password," enter the existing password and press <Enter>.

3. You will see "Confirm Password." Type it again, and press <Enter>.

4. Select Set Password again, and at the "Enter Password" prompt, enter the new password and press <Enter>.

5. At the "Confirm Password" prompt, retype the new password, and press <Enter>.

6. Select Save to CMOS and EXIT, type <Y>, then <Enter>.

To Disable Password

1. Choose the Set Password option from the CMOS Setup Utility main menu and press <Enter>.

2. When you see "Enter Password," enter the existing password and press <Enter>.

3. You will see "Confirm Password." Type it again, and press <Enter>.

4. Select Set Password again, and at the "Enter Password" prompt, don't enter anything; just press <Enter>.

5. At the "Confirm Password" prompt, again don't type in anything; just press <Enter>.

6. Select Save to CMOS and EXIT, type <Y>, then <Enter>.

4.2.11 Save & Exit Setup

If you select this option and press <Y> then <Enter>, the values entered in the setup utilities will be recorded in the chipset's CMOS memory. The microprocessor will check this every time you turn your system on and use the settings to configure the system. This record is required for the system to operate.

4.2.12 Exit Without Saving

Selecting this option and pressing <Enter> lets you exit the Setup program without recording any new values or changing old ones.
Figure 4.10: Exit Without Saving

Chipset Setup

Introduction
Installation of Chipset drivers
-for Windows 98/2000/XP
Further information

Chapter 5 Chipset Setup

5.1 Introduction

The specifications and features are described as follows:

5.1.1 Chipset
The PCM-3380 uses a Intel 855GME/ICH4 chipset and 400 MHz FSB.

5.2 Installation of the Chipset driver

Complete the following steps to install the Chipset driver. Follow the pro-
cedures in the flow chart that apply to the operating system that you are
using within your PCM-3380.

Notes: *1. The windows illustrations in this chapter are*
        intended as examples only. Please follow the
        listed steps, and pay attention to the instruc-
        tions which appear on your screen.

        2. For convenience, the CD-ROM drive is des-
        ignated as "D" throughout this chapter.

5.2.1 Installation for Windows 98/ME/2000/XP
To install PCI Graphic driver for Windows 98/2000/XP, please run the set
up wizard "Intel(R) Extreme Graphic 2" in CD-ROM. Example of
installation steps is shown as bellow:

Setup

InstallShield

[< Back] [Next >] [Cancel]

Press "Yes" to reboot.

Setup

InstallShield(R) Wizard Complete

The InstallShield(R) Wizard has successfully installed Intel(R) Chipset Software Installation Utility. Before you can use the program, you must restart your computer.

⦿ Yes, I want to restart my computer now.

○ No, I will restart my computer later.

Remove any disks from their drives, and then click Finish to complete setup.

VGA/LCD Graphic

Introduction
Installation of VGA Graphic drivers
-for Windows 98/2000/XP
Further information

Chapter 6 VGA Graphic Setup

6.1 Introduction

The PCM-3380 has an onboard VGA/LCD interface. The specifications and features are described as follows:

6.1.1 Chipset

The PCM-3380 uses a Intel 855GME 7009 chipset for its graphic controller. It supports Dual Display(CRT + 36bit LVDS

6.1.2 Display memory

The 855GME chip can support up to 64MB dynamic frame buffer shared with system memory; the VGA controller can drive CRT displays up to 1600 x 1200 at 85-Hz and, color panel displays in LVDS model with resolutions up to UGXA pnel resolution with frequency range from 25 MHz to 112 MHz.

6.1.3 Display types

CRT and panel displays can be used simultaneously. The PCM-3380 can be set in one of three configurations: CRT only, LVDS only, both CRT and LFP (LVDS). The system is initially set to simultaneous display mode - CRTand LFP (LDVS) . If you want to enable other display mode,please set up manually. Set up example is shown as in the following chapters.

6.1.4 Dual/Simultaneous Display

The PCM-3380 uses a Intel 855GME controller that is capable of providing simultaneous dual view display of the same content on a flat panel and CRT.

To set up dual view (simultaneus mode) under Windows 9x, Windows ME, Windows NT/2000/XP, follow these steps:

Step 1. Open the Control panel, and select "Display", "Settings".

Step 2. Select "Advanced.."

Step 3. Select "Graphic Properties.."

Step 4. Select "Devices" mode and click "OK".

Figure 6.1: Selecting Display Settings

6.2 Installation of the PCI Graphic driver

Complete the following steps to install the Intel extreme Chipset Graphics Driver Software. Follow the procedures in the flow chart that apply to the operating system that you are using within your PCM-3380.

Notes: *1. The windows illustrations in this chapter are intended as examples only. Please follow the listed steps, and pay attention to the instructions which appear on your screen.*

                 2. For convenience, the CD-ROM drive is designated as "D" throughout this chapter.

6.2.1 Installation for Windows 98/ME/2000/XP

To install Intel extreme Chipset Graphics Driver Software for Windows 98/2000/XP, please run the set up wizard "Intel(R) Extreme Graphic 2" in CD-ROM. Example of installation steps is shown as bellow:

Intel(R) Extreme Chipset Graphics Driver Software - InstallShield Wizard

Intel(R) Extreme Graphics 2

Welcome to the InstallShield(R) Wizard for Intel(R) Extreme Graphics 2

Welcome. This program will install Intel(R) Extreme Graphics 2 on your computer. It is strongly recommended that you exit all Windows programs before running this setup program.

< Back   Next >   Cancel

45   *Chapter 6 VGA/LCD Graphic*

Press "Yes" to reboot.

Notes: *Windows 98 Second Edition has some limit to install VGA. The system will ask user to insert "intel Corporation Installation Disk#1" after restarting the system. To avoid the unnecessary problem, please not to install Windows 98SE.*

6.2.2 VGA potential problems
To adjust resolution, please follow the below steps:

1.   Click on the right conner and choose Graphics Options.
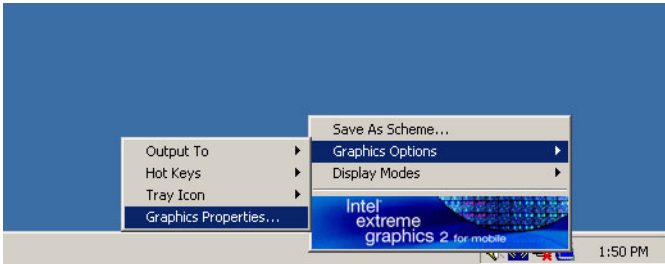

2.
3.   Choose monitor icon, then you can adjust resolution.
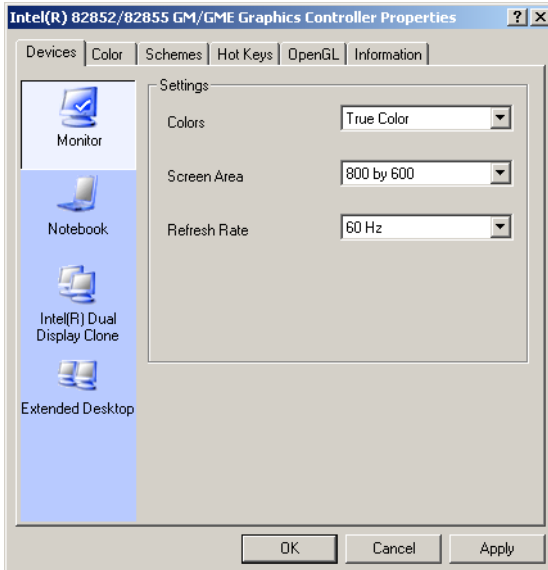

6.3 Further Information

For further information about the AGP/VGA installation in your PCM-3380, including driver updates, troubleshooting guides and FAQ lists, visit the following web resources:

Advantech websites: www.advantech.com

www.advantech.com.tw

Audio Setup

The PCM-3380F is equipped with an audio interface that records and plays back CD-quality audio. This chapter provides instructions for installing the software drivers included on the audio driver diskettes.

Chapter 7 Audio Setup

7.1 Introduction

The PCM-3380's on-board audio interface provides high-quality stereo sound and FM music synthesis (ESFM) by using the Intel ICH4 audio controller. The audio interface can record, compress, and play back voice, sound, and music with built-in mixer control.

7.2 Driver installation

7.2.1 Before you begin

Please read the instructions in this chapter carefully before you attempt installation. The audio drivers for the PCM-3380 board are located on the audio driver CD. Run the supplied SETUP program to install the drivers;

Note: *1. The files on the software installation diskette are compressed. Do not attempt to install the drivers by copying the files manually. You must use the supplied SETUP program to install the drivers.*

7.2.2 Windows 9x/2000/Me/XP drivers

Step 1. To install Audio driver for Windows 98/2000/XP, please run the set up wizard "InstallShield Wizard for Realtek AC'97 Audio" in CD-ROM. Example of installation steps is shown as bellow.
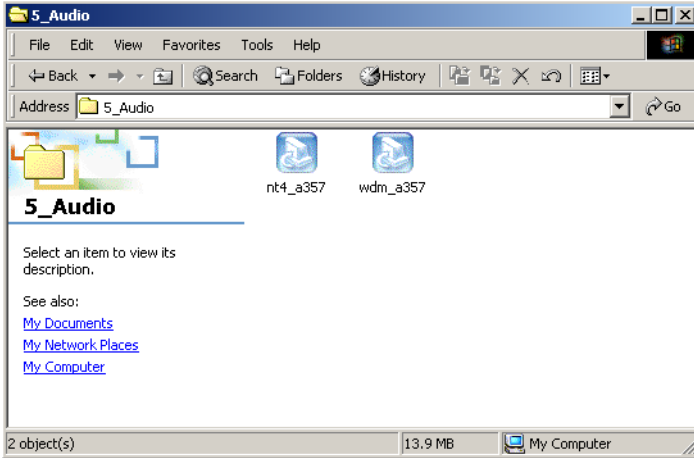

Step 2. Click "Next" to install the Realtek AC'97 Audio
Step 3. Click "Yes" to continue the installation
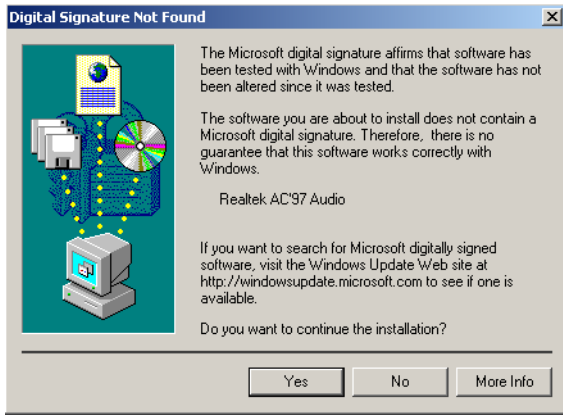

Step 4. In the following Hardware Update Wizard window, click "Finish" for Windows to complete audio driver installation.

LAN Configuration

Chapter 8 PCI Bus Ethernet Interface

8.1 Introduction

The PCM-3380F is equipped with a high-performance 32-bit Ethernet chipset which is fully compliant with IEEE 802.3 100 Mbps CSMA/CD standards. It is supported by major network operating systems. It is also both 100Base-T and 10Base-T compatible.
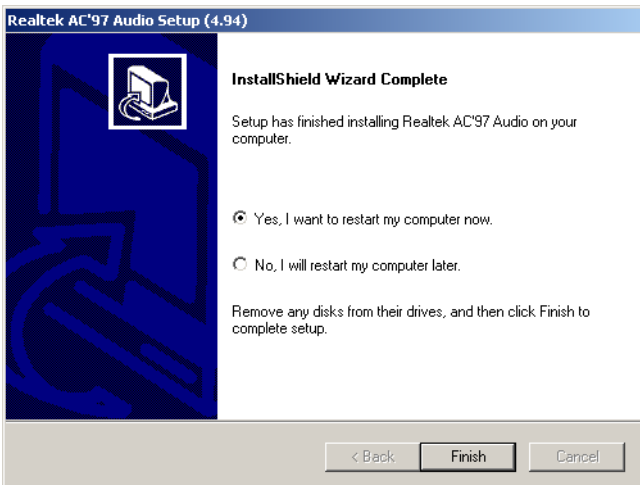

8.2 Features

- Intel 82562 10/100Base-T Ethernet LAN controller
- Optional Intel 82540 10/100/1000 Base-T Ethernet LAN controller
- Supports Wake-on-LAN remote control function.
- PCI Bus Master complies with PCI Rev. 2.1
- Complies with 100Base-TX, and 10Base-T applications.
- Single RJ-45 connector gives auto-detection of 10 Mbps or 100 Mbps network data transfer rates and connected cable types.
- ACPI Rev. 2.0, and Device Class Power Management Rev. 1.0.

8.3 Installation of Ethernet Driver

Before installing the Ethernet driver, note the procedures below. You must know which operating system you are using in your PCM-3380, and then refer to the corresponding installation procedure. Then just follow the steps described. You will quickly and successfully complete the installation, even if you are not familiar with instructions for Windows.

.

Note: The windows illustrations in this chapter are examples only. You must follow the flow chart instructions and pay attention to the instructions which then appear on your screen.

8.3.1 Installation for Windows 2000

Note: The CD-ROM drive is designated as"D" throughout
            this section.

1.   Click "Setup" icon in path "D:\3380\LAN\"
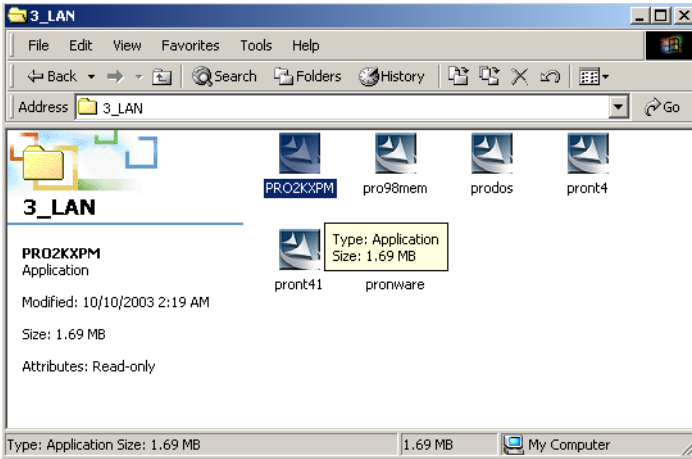

2.   Choose "Accept" item and click "Next" to go next step.

3.   Click "Next".
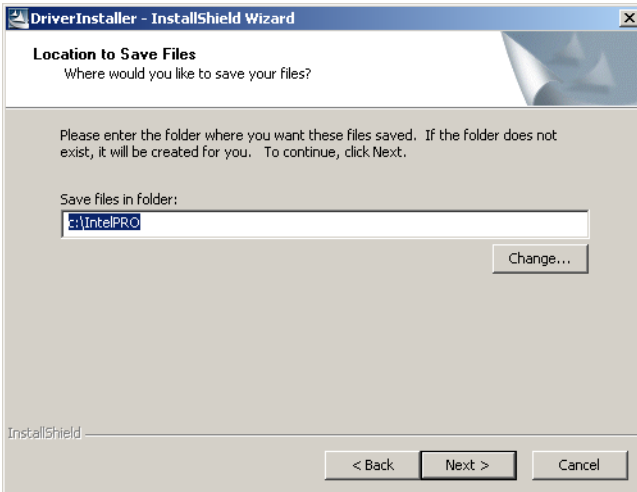

4.   Click "Install" to begin the installation.

5.   Click "Exit" to exit the wizard.

8.3.2 Installation for Windows NT

1. Select "Start", "Settings", "Control Panel" and double click "Network" icon.
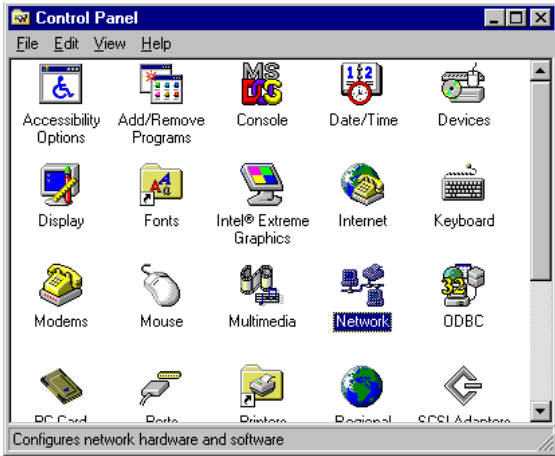

2. Then this menu will show on the screen. And click "Yes" to install network driver.
3. Select "Wired to the network" and click "Next"
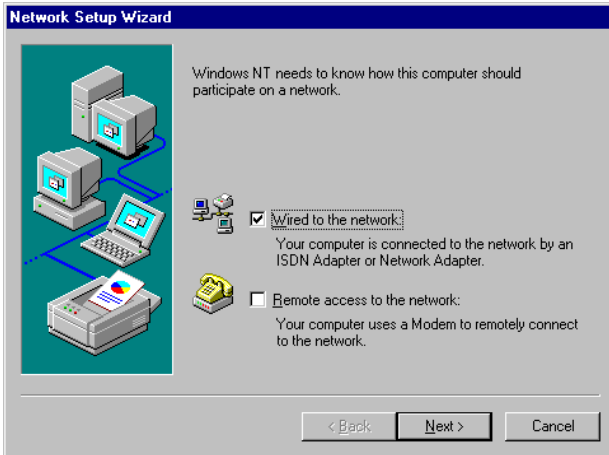

4. Click "Start Search" to searh a Network Adapter. Then click "Next" to go next step
5. Base on current network environment to modify the Network Protocol then Click "Next"
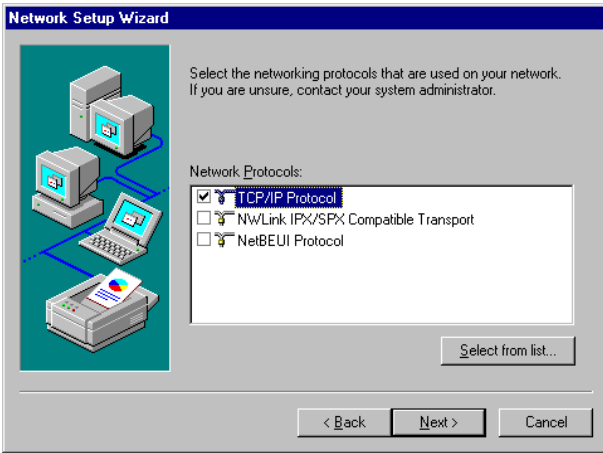

6.Click "Next" to go to next step
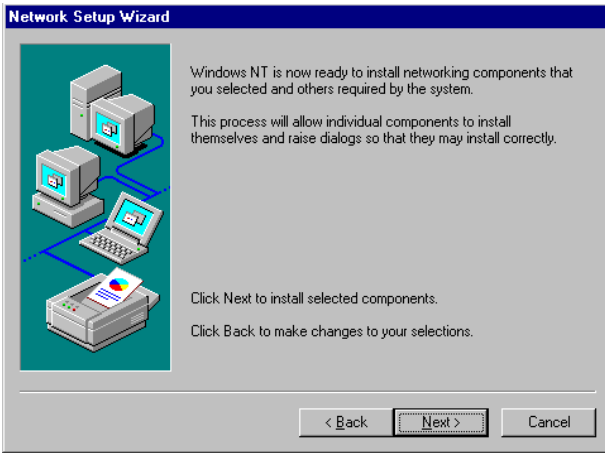

7. Click "Next" to install Network Adapter driver.
8. Check the Licemse Agreement first then select "I accept the terms in the license agreement" and click "Next".
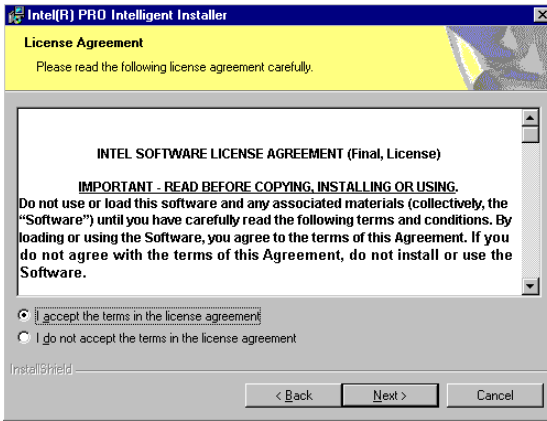

9. Select "Typical" and Click "Next".
10. Click "Install" to start to install driver.
11. Click "Finish" to finish install driver.

CHAPTER **9**

USB Setup

Introduction
Installation of USB drivers
-for Windows 98/2000/XP
Further information

Chapter 9 USB Setup

9.1 Introduction

The PCM-3380 support 6 ports USB2.0/1.1.

9.2 Installation of the PCI USB driver

Notes: *1. The windows illustrations in this chapter are intended as examples only. Please follow the listed steps, and pay attention to the instructions which appear on your screen.*

2. For convenience, the CD-ROM drive is designated as "D" throughout this chapter.

9.2.1 Installation for Windows 98/ME/2000/XP

The USB drivers for the PCM-3380 board are located on the

USB driver CD. Example of installation steps is shown as bellow:
Notes: *Windows 98 Second Wdition has some limit on install USB. The user can install USB driver without any problem, however, the system asks user to provide driver after USB device is actually inserted into the system. To avoid the unnecessary problem, please not to install Windows 98SE.*

9.2.2 Installation for windows 2000

Upgrade Device Driver Wizard

Install Hardware Device Drivers
A device driver is a software program that enables a hardware device to work with an operating system.

This wizard upgrades drivers for the following hardware device:

Universal Serial Bus (USB) Controller

Upgrading to a newer version of a device driver may add functionality to or improve the performance of this device.

What do you want the wizard to do?

○ Search for a suitable driver for my device (recommended)

● Display a list of the known drivers for this device so that I can choose a specific driver

< Back   Next >   Cancel

Upgrade Device Driver Wizard

Hardware Type
What type of hardware do you want to install?

Select a hardware type, and then click Next.

Hardware types:

- NT Apm/Legacy Support
- Other devices
- PCMCIA adapters
- Ports (COM & LPT)
- Printers
- SCSI and RAID controllers
- Sound, video and game controllers
- System devices
- Tape drives

< Back   Next >   Cancel

Upgrade Device Driver Wizard

Select a Device Driver
Which driver do you want to install for this device?

Select the manufacturer and model of your hardware device and then click Next. If you have a disk that contains the driver you want to install, click Have Disk.

Models:

Intel (r) 82801DB/DBM USB Enhanced Host Controller
Standard Enhanced PCI to USB Host Controller

○ Show compatible hardware   [Have Disk...]
○ Show all hardware of this device class

[< Back] [Next >] [Cancel]

Install From Disk

Insert the manufacturer's installation disk into the drive selected, and then click OK.

[OK]
[Cancel]

Copy manufacturer's files from:

F:\4_USB20\Win2k

[Browse...]

Upgrade Device Driver Wizard

Select a Device Driver
Which driver do you want to install for this device?

Select the manufacturer and model of your hardware device and then click Next. If you have a disk that contains the driver you want to install, click Have Disk.

Manufacturers:

(Standard USB Hub)
Intel
NEC

Models:

Intel PCI to USB Enhanced Host Controller

2F8-2FF	Serial port 2
300-31F	Prototype card
360-36F	Reserved
378-37F	Parallel printer port 1 (LPT 2)
380-38F	SDLC, bisynchronous 2
3A0-3AF	Bisynchronous 1
3B0-3BF	Monochrome display and printer adapter (LPT1)
3C0-3CF	Reserved
3D0-3DF	Color/graphics monitor adapter
3E8-3EF	Series port 3
3F0-3F7	Diskette controller
3F8-3FF	Serial port 1

* PNP audio I/O map range from 220 ~ 250H (16 bytes)
  MPU-401 select from 300 ~ 330H (2 bytes)

C.2 1st MB memory map

Table C.2: 1st MB memory map

Addr. range (Hex)	Device
F0000h - FFFFFh	System ROM
*CC000h - EFFFFh	Unused (reserved for Ethernet ROM)
C0000h - CBFFFh	Expansion ROM (for VGA BIOS)
B8000h - BFFFFh	CGA/EGA/VGA text
B0000h - B7FFFh	Unused
A0000h - AFFFFh	EGA/VGA graphics
00000h - 9FFFFh	Base memory

* If Ethernet boot ROM is disabled (Ethernet ROM occupies about 16 KB)

* E0000 - EFFFF is reserved for BIOS POST

C.3 DMA channel assignments

Table C.3: DMA channel assignments

Channel	Function
0	Available
1	Reserved (audio)
2	Floppy disk (8-bit transfer)
3	Available (parallel port)
4	Cascade for DMA controller 1
5	Available
6	Available
7	Available

* Audio DMA select 1, 3, or 5

** Parallel port DMA select 1 (LPT2) or 3 (LPT1)

C.4 Interrupt assignments

Table C.4: Interrupt assignments

Interrupt#	Interrupt source
IRQ 0	Interval timer
IRQ 1	Keyboard
IRQ 2	Interrupt from controller 2 (cascade)
IRQ 3	COM2
IRQ 4	COM1
IRQ 5	COM4
IRQ 6	FDD
IRQ 7	LPT1
IRQ 8	RTC
IRQ 9	Reserved (audio)
IRQ 10	COM3
IRQ 11	Reserved for watchdog timer
IRQ 12	PS/2 mouse
IRQ 13	INT from co-processor
IRQ 14	Primary IDE
IRQ 15	Secondary IDE for CFC

* Ethernet interface IRQ select: 9, 11, 15
* PNP audio IRQ select: 9, 11, 15
* PNP USB IRQ select: 9, 11, 15
* PNP ACPI IRQ select: 9, 11, 15
