

PCM-9576

Socket 370 Pentium III SBC with 3 Ethernet/PCI Extension

Introduction

Advantech's new PCM-9576 is a Socket 370 SBC designed with customer needs in mind. With the ability to accept Pentium®III/ Celeron™ processors up to 850 MHz, supply 2, 3 or even 4 10/100 Mbps ethernet ports, the PCM-9576 is right at home in any network environment. The PCM-9576 can be used as a dual ethernet firewall device, triple ethernet firewall/DMZ device or through its PCI expansion slot, a four ethernet port device that allows centralized management of a Secure Virtual Network, including firewall security and VPNs or PCI add-on cards for encryption acceleration. Applied in any network environment or in a stand-alone chassis supplied by Advantech, the PCM-9576 has the processing power and reliability to handle your mission critical, high availability applications.

The PCM-9576 is of course a powerful and compact, full featured (5.75" x 8") SBC that can be used in a multitude of embedded applications. However, certain features make it attractive for network administration. An Optional VGA/LCD controller saves on cost. VGA/LCD is unnecessary for many network applications. With the available COM port, administrators can simply connect a PC (console) for configuration. Scalable ethernet lets users pay for the ethernet they need. Order dual or triple Intel®10/100 Mbps 82559ER controllers. Or add another PCI ethernet card. The PCM-9576 offers GPIO support with 3 general purpose output controls.

Great Flexibility to Meet Network Appliance Market Needs

The PCM-9576 gives customers the choice to pick and choose onboard hardware to better match application needs for cost, capability and performance. This includes an optional VGA/LCD controller, optional PC/104 connector and additional COM ports if needed. Flexibility is the key in a platform that drives network appliance applications ranging from security monitoring, storage and management appliances and voice and media gateways.
