- 1 Turn off your computer and unplug the power cord.
- 2 Remove the cover of your computer.
- 3 Touch the metal part on the surface of your computer to neutralize the static electricity that might be on your body.
- 4 Place the DVP-7010BE into Mother Board PCI slot.
- 5 Connect appropriate accessories (Video cable to camera. if necessary) to the DVP-7010BE.
- 6 Replace the cover of your computer chassis.
- 7 Plug in the power cord and turn on the computer.

Note: Keep the anti-static bag for future use. You might need the original bag to store the card if you have to remove the card from the PC or transport it elsewhere.

1.9 Software / Driver Installation

Before you begin

To facilitate the installation of the enhanced display device drivers and utility software, you should read the instructions in this chapter carefully before you attempt installation. The device drivers for the DVP-7010BE board are located on the software installation CD. The auto-run function of the driver CD will guide and link you to the utilities and device drivers under Windows system. Before you begin, it is important to note that most display drivers need to have the relevant software application already installed in the system prior to installing the enhanced display drivers. In addition, many of the installation procedures assume that you are familiar with both the relevant software applications and operating system commands. Review the relevant operating system commands and the pertinent sections of your application software user's manual before performing the installation.

Installation

Step 1: Pop-up the “System Properties” window, choose the “Hardware” page, and press the “Device Manager” bottom.

Step 2: Click the PC icon and press the left bottom of the mouse.

1.10.3 Resolution

Set the video capturing resolution. Please refer to “Chapter 2.5.15 AdvDVP_SetResolution”.

Notice: *For the resolution of VGA or D1, the capture video will have the interlace effect on the video image. In other words, there will be lines in the capture image especially when the targeted image is moving. To eliminate this effect, user might need to set the resolution down to 640x240 and use specific algorithms to compensate the image interlace between the scanning even field image and odd field image. For CIF/320x240 resolution, there will be no interlace effect.*
